

Assessment Rubric

Laboratory Activity Sheet — DTM Simulator

Use this rubric to score a completed Laboratory Activity Sheet. Each criterion is scored 1–5; the maximum total is 25.

Criterion	1 (Poor)	3 (Satisfactory)	5 (Excellent)	Score
Data Import Accuracy	Data not loaded or major errors uncorrected	Data loaded with minor unresolved issues	Data loaded cleanly; validation issues (if any) correctly resolved	
Terrain Generation Understanding	Cannot describe the generated surface	Describes the surface with minimal detail	Clearly describes surface shape and relates it to triangle count/point density	
Terrain Analysis Interpretation	Slope/drainage results copied without interpretation	Results recorded with partial interpretation	Slope classification and drainage correctly interpreted and explained	
Engineering Recommendation Quality	No clear recommendation, or unsupported by data	Recommendation given with limited justification	Recommendation clearly justified using cut/fill, slope, and drainage results	
Report Clarity & Completeness	Sheet largely incomplete or illegible	Sheet mostly complete with minor gaps	Sheet fully complete, organized, and legible	

Total Score (out of 25): _____
